

Bolgare, March 2005

**Subject : revised TLM filter series.**

We wish to inform you about some improvements applied to the above filter series :

- the filter head has been modified and it is now possible to fit a clogging indicator of differential type. As you know, this type of indicator is the most precise for in line applications, because it measures the pressure upstream and downstream the filter element, so it gives an exact indication of the right time for replacing the clogged filter element. Our differential indicators are available in different versions : visual, visual and electrical, just electrical; the electrical one is also available with thermostat, inhibiting the alarm indication until the oil temperature reaches 30°C, thus avoiding any risk of false alarms in case of cold start
- the filter elements are now from the CRE series, with high resistance plastic end caps and captive O-ring seals, ensuring a perfect radial sealing.
- The size 40 is no longer existing and the ¾" port size is now available as an option of size 55.

The new catalogue in .pdf format is available on our website [www.sofima-hyd.com](http://www.sofima-hyd.com) or you can ask us for a copy by fax.

Our sales department is at your disposal for any information concerning the prices of this new version.

We are at your disposal for any further information.

Best regards
