

Bolgare, March 2005

**Subject : new ordering codes – new catalogue S05.**

We are pleased to inform you that the updating of ordering codes of our products, started on October 2003, is now completed. As you know the new coding system makes easier the order processing and consequently enable us to give you a more efficient service.

The last updating is concerning the RFC-RSC-TLM-LFM-FAM-MSZ-AMF-MAR and FSB series and it is described on our new catalogue (already available on our website [www.sofima-hyd.com](http://www.sofima-hyd.com) in .pdf version and soon in the new printed catalogue S05).

As usual, to make it easier for you, on our orderconfirmations you will see also the former codes under "Description".

At the same time a general revision of our catalogue has been done and some news introduced :

- some new pages, as introduction, give basic information about the contamination control and the filter selection
- the clogging indicators are described in clear tables, complete with technical data and schematics; the range of the differential indicators is now enlarged with an electrical only version and with one with thermostat for applications where cold starts can occur
- the TLM series has been redesigned to fit also clogging indicators of differential type
- the new AMD series, spin-on filters with differential clogging indicator, for low pressure in line applications has been added
- the new GTC series, mobile filtration unit, has been added
- the new Hydro-dry series, filter elements for water removal from the oil, has been added.

We are at your disposal for any further information.

Best regards
